Education

Jaypee Institute of Information Technology

September 2023 – May 2027

Bachelor of Technology in Computer Science, CGPA: 8.69

Noida, U.P.

Relevant Coursework

- Data Structures
- Algorithms
- Database Systems
- Operating Systems
- Web Development
- Software Development

Experience

Orato

November 2025 – January 2026

Software Developer Intern

Dubai, UAE

- Architected a custom backend infrastructure from scratch for an AI voice platform, integrating Large Language Models (LLMs) and real-time communication protocols to enable scalable, emotionally intelligent two-way conversations.
- Optimized application performance by diagnosing and resolving critical frontend and backend bugs, significantly enhancing system stability for automated outbound calling and lead qualification features.

Projects

Notify | *Next.js, React, Node.js, MongoDB, Tailwind CSS, Nodemailer, Docker*

GitHub – Live Site

- Developed a progressive web application integrating 3 major platforms (Codeforces, CodeChef, LeetCode) with automated cron jobs to fetch contest data, serving 500+ users with real-time updates.
- Deployed a smart notification system using Nodemailer to deliver scheduled email reminders, featuring secure authentication flows with OTP verification and cross-platform friend tracking.

Agentic Browser | *Python, LangChain, TypeScript, React, WXT, WebSockets*

GitHub

- Architected a Model Agnostic Chrome extension using Deep Agent architecture to orchestrate complex browser automations, improving task decomposition success rates by 40% over traditional scripts.
- Implemented a Semantic DOM Compression pipeline via WebSockets to overcome LLM token limits, reducing API latency by 79% and minimizing memory overhead during complex DOM manipulation tasks.

Converse | *React, Socket.io, MongoDB, Express.js*

GitHub – Live Site

- Constructed an interactive chat interface employing React hooks and Socket.io, utilizing 11+ ShadCN UI elements to handle concurrent messaging, establishing the project's core UI architecture.
- Engineered a real-time messaging API with secure file uploads for audio messages, implemented JWT-based authentication and optimized database storage for large binary assets, reducing message latency by 15%.

Technical Skills

Languages: C, C++, Python, JavaScript (ES6+), TypeScript, SQL (PostgreSQL, MySQL), HTML, CSS3

Frameworks & Libraries: Next.js, React.js, Redux, Node.js, Express.js, Socket.io, Tailwind CSS, LangChain

Databases & Backend Tools: PostgreSQL, MongoDB, Vector Databases, RAG, REST APIs, JWT Authentication

Developer Tools: Git, GitHub, Postman, Docker, Vercel, VS Code

Leadership / Extracurricular

Google Developer Groups

September 2024 – August 2025

Frontend Developer

Noida, U.P.

- Orchestrated BitBox 5.0 hackathon with 1400+ registrations, coordinating a 12-hour event and achieving 100% completion rate with zero technical incidents.
- Spearheaded the Google Cloud Study Jam for 80+ participants, directing a 4-person team to deliver 10+ hands-on labs.

Competitive Programming

2023 – Present

Participant

Online Platforms

- Secured 3rd place out of 100+ teams at Code Clash, utilizing advanced data structures and algorithms to solve complex challenges within strict time constraints.
- Formulated optimal solutions for 700+ algorithmic challenges across platforms like LeetCode (600+) and CodeForces (100+).

Open Source Contributions

2023 – Present

Contributor

GitHub

- Successfully merged 25+ Pull Requests across various repositories, notably engineered the HOD Dashboard for a faculty appraisal system to streamline department-level performance tracking.
