Education

Jaypee Institute of Information Technology

September 2023 – May 2027

Bachelor of Technology in Computer Science, CGPA: 8.75

Noida, U.P.

Experience

Orato

November 2025 – January 2026

Software Developer Intern

Dubai, UAE

- Architected a custom backend infrastructure from scratch for an AI voice platform, integrating Large Language Models (LLMs) and real-time communication protocols to enable scalable, emotionally intelligent two-way conversations.
- Optimized application performance by diagnosing and resolving critical frontend and backend bugs, significantly enhancing system stability for automated outbound calling and lead qualification features.

Projects

Notify | *Next.js, React, Node.js, MongoDB, Tailwind CSS, Nodemailer, Docker*

GitHub – Live Site

- Developed a progressive web application integrating 3 major platforms (Codeforces, CodeChef, LeetCode) with automated cron jobs to fetch contest data, serving 500+ users with real-time updates.
- Deployed a smart notification system using Nodemailer to deliver scheduled email reminders, featuring secure authentication flows with OTP verification and cross-platform friend tracking.

Agentic Browser | *Python, LangChain, TypeScript, React, WXT, WebSockets*

GitHub

- Architected a Model Agnostic Chrome extension using Deep Agent architecture to orchestrate complex browser automations, improving task decomposition success rates by 40% over traditional scripts.
- Implemented a Semantic DOM Compression pipeline via WebSockets to overcome LLM token limits, reducing API latency by 79% and minimizing memory overhead during complex DOM manipulation tasks.

Candidate Data Transformer | *FastAPI, Python, Kafka, PostgreSQL, FastStream, React, Groq LLM*

GitHub

- Architected a decoupled, event-driven data pipeline leveraging FastStream and Apache Kafka to asynchronously ingest, parse, and normalize unstructured candidate profiles from disparate sources (PDFs, GitHub API, Google Sheets), serving real-time updates to a React frontend.
- Engineered a sophisticated entity resolution engine using Groq LLM and a custom-weighted confidence scoring algorithm, executing heuristic-based attribute matching (cross-referencing email hashes, social handles, and skills) to resolve identity conflicts in PostgreSQL with 98% precision.

Technical Skills

Languages: C, C++, Python, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Frameworks & Libraries: Next.js, React.js, Redux, Node.js, Express.js, Socket.io, Tailwind CSS, FastStream, LangChain

Databases & Cloud Tools: PostgreSQL, MongoDB, Vector Databases, Redis, Kafka, Docker, REST APIs, JWT, Vercel

Developer Tools & Methodologies: Git, GitHub, Postman, Linux, System Design, CI/CD, Agile Methodologies

Leadership / Extracurricular

Google Developer Groups

September 2024 – August 2025

Frontend Developer

Noida, U.P.

- Orchestrated BitBox 5.0 hackathon with 1400+ registrations, coordinating a 12-hour event and achieving 100% completion rate with zero technical incidents.
- Spearheaded the Google Cloud Study Jam for 80+ participants, directing a 4-person team to deliver 10+ hands-on labs.

Competitive Programming

2023 – Present

Participant

Online Platforms

- Secured 3rd place out of 100+ teams at Code Clash, utilizing advanced data structures and algorithms to solve complex challenges within strict time constraints.
- Formulated optimal solutions for 700+ algorithmic challenges across platforms like LeetCode (600+) and CodeForces (100+).

Open Source Contributions

2023 – Present

Contributor

GitHub

- Successfully merged 25+ Pull Requests across various repositories, notably engineered the HOD Dashboard for a faculty appraisal system to streamline department-level performance tracking.
